

# ***EIM VFD ADD-ON PACKAGES***

Treyline Supply & Mfg. Co. LLC offers several packages that can be installed during the building process into your VFD system. It is important to discuss these packages with your sales person prior to ordering your VFD as they cannot be added later.

- **TRANSDUCER AND CABLE PACKAGE:** The transducer and cable package include a 0-100 psi transducer and appropriate cable (32.8 ft). This package allows for the VFD to communicate with the transducer for auto pressure regulation.
- **ADDITIONAL PSI SETPOINT PACKAGE:** The additional set-point package allows for different PSI setpoints for different areas. When this package is ordered, it is billed per additional set-point desired, and consists of up too 4 separate relays. When the desired Relay is energized in auto mode, the VFD will adjust to the pre-set setpoint for that location automatically.
- **BREAKER ADD-ON PACKAGE:** The breaker add-on package is a factory installed breaker to feed a irrigation pivot, up too 60A. This package requires the main breaker to be up sized to accommodate the additional load. This can be installed on a single phase VFD application or three phase.
- **ROTO-DRIVE PACKAGE:** The roto-drive package has a built in EIM rotary phase converter and supporting breaker, to run the irrigation pivot or other small loads up too 26a. This is truly an all in one package for the irrigation customer. Simply land your incoming single phase utility power, pump output wires, and pivot output wires and your done! This package comes in 13A, 19.5A, and 26A output configurations.
